JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

The Bulletin further says that no epidemic of any consequence had appeared during the year; that of 260 cases of smallpox 188 originated in Rouen—i. e., that of every 5 cases at least 1 came from outside of Rouen.

GUATEMALA.

Report from Livingston, fruit port.

Acting Assistant Surgeon Peters reports as follows: Week ended October 14, 1905. Present officially estimated population, 3,500; 2 deaths; 1 case yellow fever; prevailing diseases, malarial and yellow fevers; general sanitary condition of this port and the surrounding country during the week, infected. The case of yellow fever developed from an infected house which had not been fumigated.

Bill of health was issued to the following-named vessel:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected
Oct. 11	Anselm.....	Mobile via Belize.	39	.....	.....	.....

Yellow-fever case in Livingston—Fumigation measures ordered by Guatemalan authorities.

OCTOBER 18, 1905.

I have to report a case of yellow fever in Livingston. The patient is a Guatemalan who came to Livingston September 5, 1905, from Sarstoon, a small place on the Guatemala coast. On the 17th instant I visited him and found him convalescent from an attack of yellow fever, having been free of fever several days.

The origin of infection in this case was easily traced, as the patient had been sleeping in a house in which, during July, there had been a number of cases of yellow fever. When I informed the governor of this department of the nature of the disease he immediately gave orders to have the house fumigated, and unless there are other infected houses which have been overlooked I do not think the infection will spread.

This is the first case of yellow fever in Livingston since July 30, 1905, therefore the infected mosquitoes have been in the house for about seventy days, as the former cases occurred about July 20 and I have not known of anyone being sick in the house since then.

HAWAII.

Fatal plague cases at Honolulu.
